

Blue-Joint Grass

Calamagrostis Canadensis

-Blue-Joint Grass is an effective shoreline stabilizer. It also has higher value than most other native shoreline grasses for winter cover. One of the best qualities that Blue-Joint Grass has is that it is a wonderful summer cover for waterfowl and shoreland mammals.

-The seeds of Blue-Joint Grass are proven to attract many songbirds.

-Blue-Joint Grass is found on lakeshores, streambanks, marshes, and exposed wet ground. Although it is predominantly a shoreline plant, it can survive in knee-deep water.
