

# Grape Woodbine

*Parthenocissus vitacea*

-The Grape Woodbine is a nice perennial vine. It does not grow as long and as vigorous as does Engelmann Ivy, but it also does not have the brilliant fall foliage of Engelmann Ivy either.

-If you are looking for a vine to take away some of the obtrusive look of a lot of rock rip rap, or a vine to add pizzazz to a log cabin, Grape Woodbine or Engelmann Ivy are wonderful choices.

-Another wonderful characteristic of Grape Woodbine is that birds simply love its fleshy fruits.

-Grape Woodbine is native to every single county in Wisconsin.
