

# Water Millet

*Echinochola walteri*

-Water Millet is one of the very few annuals that I included in this listing. The reason that I included it is due to its tremendous potential for immediate shoreline stabilization and waterfowl food.

-Water Millet is actually a grass and the flowering body sort of looks like a hedgehog.

-Water Millet grows best directly along the shoreline in moist to wet soils in full sun to partial shade.

-If you are a serious duck hunter, or just enjoy the beauty of watching waterfowl, I suggest planting some Water Millet on your shoreland property.

**A monkey learns to jump by truing again and again.**
